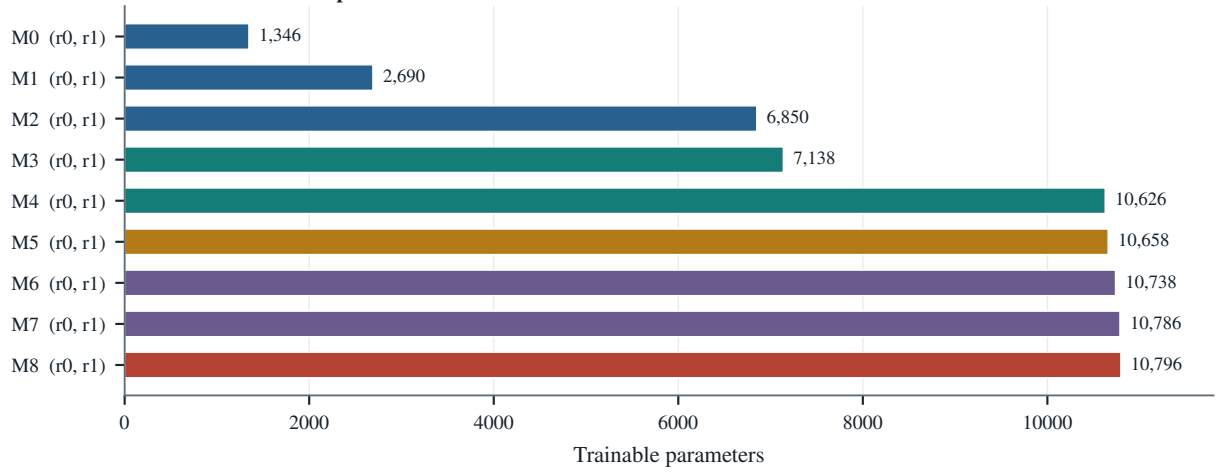
A Raw-feature feedforward backbones

M0	39 → 32 → 2 (exact GELU hidden layers)	1,346 parameters
M1	39 → 64 → 2 (exact GELU hidden layers)	2,690 parameters
M2	39 → 64 → 64 → 2 (exact GELU hidden layers)	6,850 parameters

B History encoding

Family	History branch (four records × four values)	Pooling and output
M3	pointwise encoder	mean/latest pool + raw branch → 128 → 2 head
M4	gated recurrent unit, 4 → 32	mean/latest pool + raw branch → 128 → 2 head

C Horizon and schedule-basis additions

M5	M4 + two-entry, eight-dimensional horizon embedding
M6	M5 + first two of five basis values projected to 16
M7	M5 + all five basis values projected to 16
M8	M7 + bias-free linear basis head (5 → 2), added to output


D Recorded trainable parameter counts
